

SWANS

JAPANESE QUALITY

**SWIMMING GOGGLES
2023**

110 YEARS

of Swimming goggles evolution.

1911

The year was 1911. We began life as a small lens manufacturer in Osaka, initially producing dust-proof eyeglasses and aviation goggles. As a boy, watching large wooden crates being loaded onto ships in the port, our founder began to nurture the dream that one day he too would make a product that would sell all around the world. That boy saw the stamp on the side of some of the crates as a symbol of his dreams: swan, spreading its wings wide, about to fly off to see the world.

However, as he was following the path to achieving his dream, Osaka was hit by a fierce air raid. Even while running through the burning streets to escape, he desperately sought to save the materials from which his glasses were made by hiding them in a well. He succeeded in protecting them from the destruction all around him. And then the war ended. Although his house had burned down and it was a struggle just to survive, he began to manufacture Swan brand swimming goggles using the small quantity of materials that he had concealed in the well. All this to realize his youthful dream of making a product that would sell worldwide.

Since 1911.

From Osaka.

2023

More than a century has passed since then. Over the course of our long history of producing eyewear, SWANS has grown into a brand that encompasses swimming goggles, snow goggles, and sports glasses.

In particular, our high-quality swimming goggles, made using technologies cultivated over many years, are continually evolving as equipment that supports the performance of swimmers across the globe.

SWANS has grown into a large company and will continue to soar worldwide, carrying the great dream of our founder.

AS SWANS.

SWANS' manufacturing takes responsibility for all aspects of quality

SWANS does not merely make lenses: we are a manufacturer with an integrated in-house system for all aspects of eyewear production, encompassing everything from stylistic and technical design to technology development and manufacturing. Our developers themselves take a real-world approach, going out into the field and exploring the elements that hold the key to development through product testing and field surveys. You could search the whole world over without finding another eyewear manufacturer that conducts the whole process in-house in this way. That is because doing things this way takes a lot of time and effort. The reason why SWANS sticks to this style of business is that it is what makes our meticulous approach to all aspects of eyewear quality possible.

As well as protecting eyes during sporting activities such as swimming and skiing, and in factories and other production environments, it is essential to ensure visibility by preventing lens fogging, minimizing glare, and achieving a good color balance. To create ideal products that meet all these requirements, SWANS staff go out into the field and work together to translate the answers we find into reality. That is what we mean when we say that SWANS' manufacturing takes responsibility for all aspects of quality.

WHY MADE IN JAPAN ?

Japanese manufacturing and SWANS' advances

SWANS is an eyewear brand established by Japanese lens manufacturer Yamamoto Kogaku Co., Ltd. The Osaka-based company has, since its founding in the city more than a century ago, produced eyewear fitted with high-performance lenses for industrial safety and sporting applications, with "made in Japan" as its primary emphasis. What springs to mind when you hear the phrase "made in Japan"? Most likely, you think of high quality standards, with care taken over even the finest details, demonstrating delicacy and precision. However, the key question is what makes something worthy of being called "high quality"?

Manufacturing in Japan often produces items that demonstrate meticulous care over the finest details, involving artisanal skills with a long tradition or highly specialized industries, for instance. From items worn about the person, such as apparel, watches, and glasses, to precision machinery like household electrical appliances and cameras, and even cars, each product is designed to be used for many years over the course of your life once you have purchased it. High-quality items made in this way are what you might call "the good stuff," representing the common aesthetic of Japanese manufacturing.

SWANS' birthplace of Osaka is an industrial city, home not only to many large corporations, but also a multitude of small and medium-sized enterprises with highly specialized technologies and materials. These diverse industries have applied themselves diligently and learned from each other, honing their skills and giving Osaka's manufacturing sector a unique quality not found in other regions.

At one stage, SWANS encountered polycarbonate plastic. As a result of trial and error, we became the first company in Japan to develop an unbreakable lens, which offered more shock resistance than the fragile glass lenses used at that time. We continued to conduct research thereafter and succeeded in developing our own processing technologies for high-performance lenses, including mirrored and anti-fog finishes.

Today, SWANS is still infusing its products with the know-how that we have single-mindedly honed. Our aim in doing so is to create an even finer embodiment of all that the phrase "made in Japan" encompasses, which can accompany users throughout their long lives.
