COMPANY

ITALIAN FAMILY COMPANY SINCE 1970

In 1970 MICO SPORT SPA started to produce technical sport socks. The most modern technologies and the most innovating materials together with the world famous sport testers and a strong selling network made of MICO SPORT a leader company on the national market. In the 80s MICO SPORT adds a complete range of "technical under-wear" to its collection. Situated in Brescia, the most industrialized province of Italy, the birthplace of the first circular knitting machines for socks and seamless products, Mico's mission is to follow sportsmen closely, with the intent to optimize and improve their efforts in daily practice. **The Mico brand has chosen to focus on body protection to ensure better performance.**

CERTIFICATIONS

OUR PERFORMANCE CERTIFICATES:

Excellence is a commitment written into our professional and ethical DNA, this is why we constantly strive to respect all quality standards in collaboration with the most important research laboratories, selecting the most innovative yarns and technical analysis of fitting. Every item of clothing we produce complies with requirements for traceability and conformity of materials, continuously improved in terms of health and safety. This is how we satisfy the Health Ministry and international certifying bodies, guaranteeing consumers the transparency we have always upheld.

Every item tested by the experts, the greatest world athletes.

MISSION

THE GLOBAL PROTECTION FORMULA

To win means not only outdoing oneself, but the others, too.

Humidity, sweat, changes in temperature, bad odours and skin irritation are the first adversaries to overcome, on any ground. With its Global Protection Formula, Mico Sport sets new standards for even the most extreme performances. Technical clothing perfect in every detail: comfort, stretch and heat control, studied for the perfect protection of all sports enthusiasts.

Only passion and concentration remain in the race, right to the final post and victory.

The MicoSport Global Protection Formula is official supplier for:

SUPERIOR FEATURES FOR RACE
COMPETITORS

SUPER FRESH

FRESHNESS IN ITS PUREST STATE

Athletes all love to beat their own record. To do so, keeping trim is not simply ambition but a necessity. The choice of suitable technical clothing also plays on performance because dressing in layers allows you to maintain the right degree of humidity and body heat. Wellness that comes from the first layer of fabric in contact with the skin, studied to expel sweat through the second and third layers to outside. Leaving bad weather conditions trailing in our wake.

INDEX SS 2024

P E R F O R M A N C E

A collection of innovative and high-performance products is born from Italian Mico Sport technology and design. Engineered technical sports garments approved by the greatest champions of all time.

One tenth less.

In the race, but also in training, a tenth less makes the difference between winning and finishing second. How to guarantee that tenth less?

In addition to training, self-sacrifice and talent, there are technical tools.

In the world of Mico, where all garments are professional and high-performance, we felt the need to create an even better line, capable of embodying the pinnacle of innovation and performance research. M1 is the hyper-professional range, specially developed in collaboration with one of the greatest ski champions ever: Alberto Tomba. Conceptual godfather, inspirer and actual tester.

M1 starts with skiing and will include those sports areas where a garment created to ensure maximum performance makes all the difference.

How we do it is our secret, but it is easy to imagine that in our market the difference is made by the quality of thread, the attention to detail during production, the field tests and a spasmodic and incessant research of technology.

Trying M1 means getting into a formula one and experiencing the thrill of a racing car.

M1 PERFORMANCE

PROTECTION FOR PERFORMANCE

ART. GI 00335 OUTERWEAR X-PERFORMANCE OUTDOOR

**MAN FULL ZIP HOODY JACKET
X-PERFORMANCE OUTDOOR**

This garment is made with Storm Block protective technology to offer excellent waterproofing performance, water repellence and exceptional durability thanks to the ripstop fabric. Designed for a wide range of outdoor activities, it is highly resistant to wear and tear and offers maximum comfort in all situations. Thanks to its innovative polyurethane membrane and specially designed protective layer, it allows water vapour to escape and prevents rain and wind from penetrating (12,000 water columns). A guarantee of benefit and real protection. Large zipped side pockets, adjustable hood with drawstring.

COMPOSITION: TESSUTO/FABRIC: 100%PL RIPSTOP - MEMBRANA/MEMBRANE: 100%PU SIZES **S M L XL XXL**

WOMAN TOP
X-PERFORMANCE SKINTECH WORKOUT

A particularly versatile range of products suitable for different sports activities, made using seamless technology. The soft fit and the constructive structure allow the body to move perfectly during sports performance, like a second skin. The use of a polyamide microfibre allows elasticity, excellent resistance to wear, breathability and quick drying.

Maximum performance thanks to the combination of polyamide, polypropylene and elastane. The result is a strong elastic belt, antibacterial thanks to the polypropylene, hypoallergenic and easy to care for, and quick-drying. The differentiation of mesh zones with increased breathability and zones with restrained structures guarantees maximum functionality and high comfort. Numerous pockets for use in a variety of activities

PROTECTION FOR PERFORMANCE

mico[®]

NO TECHNICAL SOCKS, NO PERFORMANCE.

Mico Sport provides protection and ensures improved performance. The right shoe with the wrong sock is worth nothing.

The lightweight technical garments by Mico Sport guarantee comfort every time, with invisible seams, muscle support technology, thermal control, breathability and oxygenation to maintain ideal skin function in any climate and location, from departure to finish line.

From aspiration to performance.

LONG LIFE PRODUCT 100% MADE IN ITALY	DURATION OVER TIME

DESCRIPTION	BENEFITS FOR THE USER
Internalized process with special machinery that enables the adjustment of the quantity of LYCRA® to be interlocked with the polyamide using a jet of air that opens and closes the fibre.	Stabilized and snug fit - easier to wear.
Special knit with selected stretch yarns and differentiated from other areas of the sock.	Muscle stimulation that helps prevent plantar fasciitis. Motion support with reduced vibrations.
Toe of the sock modelled according to the anatomy of the toes without excess material. Toe closure with super-flat double linking technology to eliminate friction.	Freedom of toe movement by eliminating friction and improving propulsion.
Varying terry cloth knitting thickness depending on the intended use.	'Shock absorber' effect: localized protection against the impacts of different sports and types of footwear.
The construction system for each sock is calibrated to fit every size as best as possible - the stabilizing pre-wash fixes the sock fit, preventing shrinking or stretching in domestic washes.	Perfect adaptability to any foot or leg (men, women and children) for superior comfort even after washing.
Originally engineering elastic structures designed to guarantee the right support for the foot and ensure optimum performance.	Active second-skin to support every performance.
Production technology (latest generation machinery): for reinforced textures and construction solutions that reduce wear in the critical points (toe and heel) as for example covering noble materials with invisible LYCRA®. High quality raw materials (selection of the highest quality available for all raw materials used) for superior performance and durability. Know-how & expertise (our people) thanks to continuous development over 50 years as sector leader, the products are created to last and perform equally over time, for maximum savings in production waste.	Quality and performance guaranteed constantly over time with consequent reduced impact on the environment and long-term economic advantage.

OUTERWEAR SHIRTS&JACKETS

BARCODE	OUTDOOR
This fabric has been especially created for Outdoor activities. It is very comfortable on the skin, has a soft touch, is highly breathable and quick drying. The characteristic striped design is obtained by using texturised yarns with different diameters that in the process of being dyed create a shadow effect in varied bright and dark shades in order to give a "barcode" look.	
BRAIDED	RUN
Bi-elastic micro polyamide interlock fabric with "honeycomb" effect. Soft, fully formed and elastic, externally it has a matted appearance with a soft feel but extremely resistant to wear. The light inner brush provides excellent thermal insulation. The high elastomer content ensures excellent comfort and a perfect fit.	
DRIRELEASE	ACTIVE TRAVEL
The unique drirelease® technology uses synthetic and natural fibres to accelerate the release of fabric moisture, pushing sweat out of the garment into the air faster than other performance fabrics on the market. The blend of fibres, engineered naturally without the use of chemical treatments, optimises absorption, dryness, softness and comfort. The natural performance of drirelease® will keep the user cool, dry and comfortable in all conditions.	
EVO SHIELD	OUTDOOR
It is made by assembling 3 types of materials. High-density, soft, matt nylon outer fabric with external micro grinding and water repellent and down proof treatment; high mechanical and wear resistance. Lightweight but warm 600 gr synthetic padding, ideal in all situations where medium thermal insulation and protection is required, together with optimal comfort. Quilted interior with Lycra trims for a better fit. It is compressible, very versatile and easily transportable	
FLOW	RUN + TRAIL
A special fabric that has a 3D structure that comprises of a "wave" effect weave on the inside while at the same time has a smooth weave on the outside. This structure ensures a perfect working balance between comfort, lightness and functionality. The presence of stretch fibres high in elasticity also means that the fabric fits and drapes well around the contours of the athlete's body. The fabric material is composed of two different polyester yarns, that complement each other in achieving a high level of breathability. The external yarn which is finer than the internal one, quickly acts in pushing away from the body any sweat while providing a very soft handle. At the same time, the internal yarn creates a 3D structure that perfectly transports humidity away from the body keeping the skin dry and comfortable.	
MELANGE	M1 + TRAIL
Two way stretch fabric with externally a flat surface and internally a rhombus pattern that helps breathability while maintaining a constant level of warmth. It offers an excellent level of protection and fit on the body. It operates as a "second skin": lightweight, soft and quick drying.	
MICOGRAPH	M1 + TRAIL
Graphene is the thinnest and lightest material that we can have today but two hundred times stronger than steel, thanks to the hexagonal layout of its carbon atoms that allows for honeycomb layered structure. Graphene is a two-dimensional hexagonal material composed of a single atom that creates hexagonal macromolecules. These are the ones that convey graphene's unique properties. Graphene printing, with its hexagonal pattern, ensures a perfect thermoregulation, dissipating excess heat in hot climates and preserving body heat in cold climates. It allows to have an antistatic fabric, that is able to disperse quickly the accumulation of electrostatic charge and guarantees a durable bacteriostatic activity preventing the proliferation of bacteria and the formation of bad odors. Last but not least, its thermal conductivity properties allow the fabric to dry quickly while maintaining a great state of comfort providing also long-lasting cooling or rapid heating effect.	
MINIRING	MULTISPORT
A fabric made on both sides with a chequered structure using highly functional polyester yarns that combine together to facilitate an active humidity management system (Dry Clim). The inside part of the fabric permits the quick transportation of humidity out to the external side where it is dispersed into the open air keeping the skin dry and comfortable.	
MOREA	M1
Matt polyamide fabric, light, two-way stretch, highly resistant - pilling and chlorine resistive - UV protection with UPF 50+	
NEW RIP	OUTDOOR
Lightweight, soft, 4-way stretch fabric. Its structure is composed of mini-squares with an almost transparent surface that allows the passage of air and quick drying.	
NICOSIA	M1 + TRAIL
Super strong and tough, two-way stretch, matt fabric -pilling resistant -dries quickly - optimal breathability - maximum comfort due to high percentage of elastic fibre.	
QUANTUM	MULTISPORT
Fabric with an external surface that is structured with a waved construction that helps insulation. The internal brushed lining guarantees warmth and comfort. It adjusts perfectly to the body shape. Highly breathable and soft touch. Produced in italy.	

OUTERWEAR SHIRTS&JACKETS

SPINNAKER+ZERO WIND	M1 + RUN
A special windblocker and waterproof mermbrane that is extremely light weight (only 5 micron) and is amongst the thinnest available in the market place. The membrane is highly technical being : THERMAL (maintains heat in the body), 100% WATERPROOF (resistant to 10,000mm), BREATHABLE (guarantees high airflow in every circumstance during all intense activities) 100% WINDPROOF (has a special sealed molecular structure that protects against the wind).	
STORM BLOCK	OUTDOOR
The Storm Block protective technology is designed to offer excellent waterproofing and water repellency performance, combined with exceptional durability. Designed for a wide range of activities, it is highly resistant to wear and tear offering maximum comfort in all situations. Thanks to the innovative membrane the Storm Block technology allows water vapor to breathe and prevents rain and wind from seeping inside. A guarantee of benefit and real protection in all outdoor activities. TECHNICAL FEATURES - Waterproofness - wind protection - breathability -anti abrasion - durability.	
TECHNOFLEECE	OUTDOOR
TECHNO FLEECE 100% Italian fabric. Exterior side with a clean highly technical appearance, abrasion resistant, while the reverse side on the interior provides excellent heat inslation. The elastomeric fibre between the two layers gives the fabric maximum comfort and wearability. Resistant to friction with high thermal insulation coefficient. Incredibly light, soft and easy care.	
ULTRAFRESH	OUTDOOR + TRAIL
A special two way stretch ultra-fresh and light fabric which is made in a structure that is composed of small indents that guarantee the maximum performance in breathability. The micro fibres which are layered in horizontal sections, absorb humidity and stimulate a quick evaporation process which reduces the heat transferred to the body to a minimum. A fabric that is highly comfortable and has a soft handle, it is also very lightweight and quick drying.	
WAVE	OUTDOOR
A fabric that is both very comfortable and lightweight yet ensures an excellent fit on the athlete's body. The fabric's composition is made up of two slightly different polyester yarns, that complement each other in achieving a high level of breathability. The external yarn which is finer than the internal one, instantaneously causes the expulsion away from the body of any sweat which is pushed into the open air to maintain an optimum level of dryness and comfort.	
WAVERLY	ACTIVE TRAVEL
An ecological fabric composed of cotton and linen with a compact and tenacious structure. It is antiseptic, anti-allergic, thermo-regulating and hygroscopic, and has a good ability to absorb moisture and favour its dispersion while keeping the skin dry. The cool, soft hand makes it ideal for hot climates.	

OUTERWEAR SHORTS&PANTS

DRY-STRETCH	RUN
A two way stretch fabric used specifically for Outdoor trousers and shorts. This fabric has an excellent level of breathability and also has thermoregulation in order to keep the body's temperature stable. In addition the fabric is water resistant, strong and robust yet the fabric is soft and comfortable to wear all day. The water repellent finish on the fabric is PFC free for an environmentally friendly product.	
ENDURANCE	RUN
A lightweight two way stretch fabric used specifically for running shorts. This fabric enjoys a very high level of breathability and adjusts to the contours of the body for an excellent fit. In addition the fabric is water repellent, strong and robust which will keep the body protected even in the most extreme of weather conditions. The water repellent finish of the fabric has been done through a PFC free process for an environmentally friendly product.	
HYPERSHELL	OUTDOOR
Resistant to abrasions and tears, warm inside thanks to its diagonal braiding. Externally the fabric is windproof, elastic and easy to care for.	
MICROPEACH	WORKOUT
Super-light microfibre fabric with a very soft hand feel. Thanks to its characteristics it keeps the body cool and dry, guarantees maximum comfort and does not stick. Its micro-section polyester fibres absorb and evaporate moisture quickly, preventing concentrations of body heat.	
PRO SHIELD	M1
Ultra lightweight and tough fabric - Two-way stretch - It fits the body perfectly in any movement. -Pilling resistant - Resistant to chlorine, sun creams and oils - UV protection - Breathable, dries quickly.	
QNOVA	M1
Q-nova® is an environmentally-sustainable nylon 6,6 Fibre obtained exclusively from regenerated raw materials and which meets given traceability requirements. Lightweight: Q-nova® enables us to manufacture more lightweight fabrics with the same qualities as fabrics made from cotton or polyester. Breathability: Q-nova® boasts excellent moisture control meaning that the skin stays fresh and dry. *uni en iso 62. Bright colours: Q-nova® has been designed to give the best possible dyeing quality. Fabrics and items of clothing made from Q-nova® are as robust as those made from virgin polyamide.	
TECHNOSHELL	OUTDOOR + ACTIVE TRAVEL
A two way stretch fabric used specifically for Outdoor trousers and shorts. This fabric has an excellent level of breathability and also has thermoregulation in order to keep the body's temperature stable. In addition the fabric is water resistant, strong and robust yet the fabric is soft and comfortable to wear all day. The water repellent finish on the fabric is PFC free for an environmentally friendly product.	
X-STRETCH	TRAIL
A two way stretch fabric used specifically for trail running shorts. This fabric enjoys a very high level of breathability and adjusts to the contours of the body for an excellent fit. In addition the fabric is water repellent, strong and robust which will keep the body protected even in the most extreme of weather conditions. The water repellent finish of the fabric has been done through a PFC free process for an environmentally friendly product.
