#### **Men's Breton Waterproof Pants**

K00458

Imagine, playing golf in a pant that acts and feels like an everyday trouser but keeps you dry in the rain. Gone are the days when intermittent rain during a round has a golfer uncertain if they should leave on or take off their rain pant. Introducing a pant that can be proudly worn during an entire round of rain, even if it dissipates midway through.

### 3D Technology

Full stretch throughout all layers, from the lining, insulation, outer fabric, and seams to create the ultimate range of movement without sacrificing

# AC-Vent™

This KJUS-patented forearm venting system speeds the body's natural cooling process. Vents located in the lower arm allow for fine-tune air circulation to microregulate your temperature.

### Anti-bacterial

Technical treatment that is blended into the fabrics, preventing the growth and spread of odor-causing bacteria

# Anti-Odoi

This technology is applied to the fabric to absorb odor-causing bacteria.

### **Body Mapping**

Special fabrics, structures, or insulations strategically placed in gender-specific anatomical locations to increase warmth or enhance breathability where it will be most effective for the body.

### Breathable

Breathability comes as standard in all KJUS products, even in waterproof pieces. The number indicates the amount of perspiration that can escape from the fabric over a specific period of time. The higher the number, the more breathable.

### **Bug Repellent**

Our innovative bug repellent finish helps to repel mosquitos for a more comfortable outdoor experience. This fabric is treated with all-natural micro-encapsulated citronella, offering a safer and non-toxic alternative to traditional repellents.

# Clo® Perforated

An innovative construction retains heat when the temperature drops while increasing breathability during activity. Perforations create an open structure, allowing moisture to easily evaporate when body heat increases. Stay active without compromising performance with this perfect balance of warmth and breathability.

KJUS leverages two different technologies to cool the body. Innovative fiber structures increase the yarn's surface area to intensify natural evaporative cooling and prolong its effect. A permanent finish on the fabric's surface creates a cooling effect when in contact with the skin. These technologies work separately or together to provide cooling on hot days.

# Dermizax® EV

A non-porous, stretchable and soft membrane with high moisture permeability, waterproofness and breathability.

# Dermizax® NX

A non-porous, stretchable and soft membrane with high moisture permeability, waterproofness and extremely high breathability.

Fabric is coated with a durable polymer barrier that reduces surface tension, ultimately repelling moisture and dirt. For optimal performance, wash garment and reapply treatment according to instructions.

### Fco-Coffee

An innovative, energy-saving process fuses recycled coffee grounds to the yarn, changing the filament characteristics to create a performance-enhancing fabric that is eco-friendly. Micropores fight against odor-causing bacteria and provide moisture-wicking while coffee grounds naturally infuse UV ray reflection into the yarn.

Waterproof fabric engineered with the highest level of breathability to support optimal regulation of body temperature as activity levels intensify. The exceptionally high rating means a substantial amount of water vapor can escape from the fabric due to the high-performing membrane. When paired with highly breathable insulation, this combination helps to keep the interior microclimate stays dry and comfortable.

### **FRFFIITE**

Innovative knit construction provides superior mobility. Engineered zonal body-mapping is specifically designed for the garment's use, delivering unparalleled breathability and temperature management.

Specialized materials engineered with highly conductive graphene absorb body heat and evenly transports it throughout the fabric, reducing cold spots and regulating heat.

# HeiQ Fresh Tech

Anti-odor technology that enhances fabrics with natural, long-lasting freshness by eliminating body and other environmental odors. Effective for up to 100 washes

# Hvdraulic

A high-performance fabric with unique fiber structures designed to vigorously draw moisture away from the skin's surface, swiftly transporting it to the exterior for rapid evaporation. This process contributes to effective moisture management and body temperature regulation during increased activity.

# Hyper 3D Stretch

100

Highly waterproof stretch panels with built-in 3D expansion channels are strategically placed within our already stretchy ski fabric. These panels are designed to follow the body's natural movement, reducing drag, and enhancing mobility.

### **KJUS Fast Thermo Core**

KJUS Growth System

High-performance stretch insulation that traps warm air and wicks moisture away, adding warmth while regulating body temperature in cold conditions.

PREMIUM DOWN

2/

PREMIUM LEATHER

PREMIUM WOOL

LASERCUT

KJUS GROWTH SYSTEM

or waist allows you to easily increase the garment's size at different intervals. KJUS Premium Down

A built-in system to accommodate a quick-growing

iunior athlete. Special construction at the hem. arms

This new generation of leather is abrasion-resistant, flexible, soft and durable.

A blend of the finest natural wool fibers that are intrinsically moisture-wicking and luxuriously warm.

Laser cut technology prevents fraying of open edges, which are bonded with the highest precision.

Our lifestyle apparel incorporates key KJUS technologies and premium craftsmanship in everyday wear, culminating in high-performance and luxurious style.

LIFESTYLE

Lightweight is a signature feature that distinguishes KJUS products. We use light materials that out-perform others in warmth-to-weight ratio.

Loro Tiana

(<del>‡</del>

MINERAL CIRCULATION

# Loro Piana Storm System

Made from the finest Italian yarns, Loro Piana fabrics are the epitome of luxury. Specializing in the processing of cashmere and extra fine wool for impeccable quality and softness, delivering a unique sensory experience for the wearer.

# Mineral Circulation

Natural minerals woven into the fabric convert infrared and visible light into energy close to your body, increasing your tissue's transfer of oxygen. This aids your body's recovery by increasing blood flow and oxygen levels, which helps soothe joint and muscle soreness and promotes faster healing.

# Moisture Renewal

Ultra-soft, breathable yarn engineered to replenish moisture, leaving your skin smooth and hydrated even in harsh conditions.

MOISTURE RENEWAL

### Orange Label

When you choose Orange Label, you are selecting the very best KJUS has to offer-a perfect fusion of elegance and cutting-edge functionality. This exclusive distinction is reserved for products that combine the world's finest materials with our most advanced technologies.

### Packable

Folds down into an ultra-compact size that can be packed into its own pocket for easy portability.

# **Hollow Pima Cotton**

Engineered cotton utilizing cutting-edge yarn technology to create a hollow inner core. This innovative design ensures maximum moisture-wicking and thermoregulation properties, keeping you cool and dry. The process not only enhances performance but also keeps the yarns lightweight, while maintaining a luxurious softness.

# Phase-Change Material

This phase-change material actively equalizes extreme temperatures and provides balanced inner climate at multiple temperatures. Wax within the fabric trap excess heat. When the temperature drops, the stored heat is released back to body.

# Polartec® Alpha®

This military-grade fleece keeps you warm, even when the body is wet. It is quick drying, highly durable and has a high warmth-to-weight ratio.

### Quick-drying

An innovative technology in the fabric or its construction that quickly wicks moisture away from the body, facilitating improved evaporation.

# Reactive Climate Control

Create the optimal environment as your body heat fluctuates. High-performance fabrics are combined with thermodynamic materials that trap body heat during peak performance and are released after you cool down, helping to regulate your body temperature.

Designed with uniquely different performanceenhancing technologies engineered for each side of the garment. This allows you to get specific technologies supporting your body's microclimate, flexibility and more depending on what side is facing out.

Stretchable fabric that expands and retracts in sync with the body and provides unrestricted freedom of movement.

101 Glossarv Glossarv

# SpheraTEMP

Maximum insulation warmth with extremely low mass, this new generation of synthetic down alternative is comprised of tiny spheres that mimic down at a fraction of the weight. It is highly water resistant and continues to insulate even when wet. Developed to be hypoallergenic and free from animal derived materials.

SpheraTEMP

# Toray 3DeFX+™

Synthetic insulation fabric consisting of four different spiral-shaped microfibers with high elasticity and thermal retention.

# Ultra-soft

Exceptionally smooth, ultra-stretch fabric that is extremely soft against the skin.

# Ultra-Sonic Bonding

Technical technique used to bond materials using ultra-sonic vibrations for a thin, longer lasting and precise seam.

# Ultra-stretch

Highly stretchable fabric that expands and retracts in sync with the body and provides unrestricted freedom of movement.

The Ultraviolet Protection Factor (UPF) rating system measures how well a fabric prevents UVA and UVB rays from penetrating through the fabric to the skin. The higher the rating, the greater the protection.

# VaporTemp

A highly innovative, thermoregulating fabric treatment that uses the energy from your body to help accelerate its natural ability to evaporate perspiration, drawing it away from your skin and out of the garment. At the same time, it helps to regulate body temperature even when weather conditions change.

# Volcanic Yarns

Refined volcanic sand and carbonized materials embedded into the fabric reflect infrared waves for quick warmth. These active particles also work together to help create the optimal humidity level on the surface of the skin. Simultaneously, antibacterial properties help to eliminate odor when activity levels intensify.

VOLCANIC YARNS

Specially engineered materials provide additional warmth in cold to mild temperatures.

WARM

Engineered with sealed seams and water-resistant zippers. The higher the number rating, the more waterproof the fabric.

WATERPROOF

102

Specially engineered coating applied to the outer fabric that provides wind blocking properties to the garment.

WINDPROOF

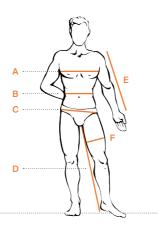

103
